

# Surgery Video Annotation Project

For each row in the spreadsheet, open the video using the provided YouTube ID and fill in the dropdown fields.

## 1) First decision: No surgery vs Surgery

Quickly scan through the video by sliding the cursor along the timeline

- If there is **no actual surgery footage** (only talking, slides, animation, setup, etc.):
  - Select **No surgery**
  - Move to the next video
- If there **is** actual surgery footage:
  - Select **Surgery**
  - Continue with the steps below

## 2) Surgery type

Select one:

- **Open**
- **Laparoscopic**
- **Robotic**
- If unsure between laparoscopic and robotic: **L/R**

## 3) Phase information

Indicate where phase info appears (select all that apply if your sheet allows; otherwise pick the best match):

- **Surgeon narration.** The surgeon is speaking over the procedure explaining the steps.
- **Phase shown on-screen as text**
- **Phase mentioned in the YouTube description**
- **Whole video is a single phase/step (title indicates it's not the full procedure)**
- If none select: **None**

#### 4) Timestamps where actual surgery occurs

Write the time ranges where **actual surgery footage** is visible (not slides, not talking, not intro/outro).

Format: MM:SS–MM:SS; MM:SS–MM:SS (segment1; segment2)

#### 5) Crop flag

Select **Crop** if the surgery is visible only in a smaller window (e.g., picture-in-picture, slides layout) and we'll need to crop to isolate the operative view. Otherwise select **No crop**.

#### 6) Notes

If anything important isn't covered above, write a short note in the **Notes** column (e.g., very short surgery segment, heavy blur/censorship, multiple procedures, unclear view, etc.).

**Please try to work quickly — we're aiming for ~5 minutes per video on average.**
